

# Centralized label life cycle management software leading to 30 – 35% increase in efficiency

Optimized label migration process reduced turn around time by 25 -30% for each product family

## Scope

- Remediate 70,000 labels across 15 manufacturing plants and 15-20 contract manufacturers using varied software
- Tool validation activities for Prisym Label design and management
- Establishing SOPs and DOPs in collaboration with customer for creating new labels with Prisym and getting them approved.
- Writing requirement specification documents for label design and conversion with SME review
- Designing various graphics in Adobe Illustrator, Photoshop and labels in Prisym for each product family
- Label verification activities(both Agile based and Prisym based verification) which includes Routing, maintaining and completing all change orders (Approved Change Orders and Change Orders) for all artifacts used in designing
