

Lean remediation approach leading to 24% reduction in lead time

A leading Europe-based medical device maker with sterile and non-sterile packaging for their products

Scope

- Defined a new approach to identify the worst-case products for testing and rationalizing the test results with similar products
- Prepared a lean approach gap analysis tool to be in compliance with ISO 11607- Part 1&2: 2019
- Performed gap closure activities for the identified gaps with testing and effective rationalizing
- Completely owned all the phases of the project including, requirement creation, testing (in-house and onsite), documentation and approval along with project management through change management
