Al Enabled Surveillance Drone

Indian OEM

Challenges

- Al Based Automated Surveillance and tracking of objects & personnel
- Formation of Drones with Automated surveillance at multiple layers and altitudes
- Solution need to function on-board with limited power and computational capability

Scope

 Design and development of AI Based solution that detects, and tracks ground based objects and personnel

Impact

 Al solution with high accuracy and speed of detection for dynamic detection & tracking

Solution

- Highly optimized to perform on-board with limited power and computational infrastructure
- Able to run for more than 8 hrs on Drone battery
- Arial human target detection, from an altitude of 10 m to 100 m, at a speed of 15 – 20 m/sec

- On-time delivery of the software solution enabled customer to integrate with their drone formation for field trial
- Versatile System that can be used for a range of applications including defense, security of large installations, managing relief supply in disaster zones
