

ODC results in 40% MDR Transition Cost Reduction for OEM's Packaging & Labelling Function

60% effort efficiency with process standardization across all manufacturing sites

A leading cardiovascular product manufacturer with 15000 labels between 130 product families

- Assessment of P&L function and their corresponding procedures in QMS
- Data mining and management of all relevant documents on single data management platform
- Development of custom tool to standardize input document for all manufacturing sites
- Update and approval (in Agile PLM) of P&L procedures as per EU-MDR in QMS
- Prioritized Packaging & Labelling for 70 product families with ~7000 labels for update by Dec'2019

Scaling to next level

- Remediation of remaining ~8000 product labels and packaging (60 product families) by end of 2020

Team Size	Model	Performance	Business Impact	Phases
60-70	T&M	Realized operational efficiency through optimizing existing processes	Process standardization across all manufacturing plants in US and Europe	2
