Developed a more adaptable digital remote monitoring gateway with greater data handling capabilities and continuous voice and data handling.

**SCOPE**
- Mechanical, hardware, and software design & development.
- Industrial design & Engineering
- Prototype development
- Compliance/Certification

**CHALLENGES**
- Translating the user requirements to engineering design
- Re-engineering – Making it IoT enabled product
- Making it compliant to social alarm standard

**FEATURES**
Constant monitoring of user’s home/surrounding environment by linking with 40 environmental sensors and data management

**Benefit**
Safety and security
Complex settings, operations not needed

**Product phase**
In market

**Team size**
45

**Market**
Europe
