

# Mobile core & Broadband use case implementation for Operational Transformation

## Customer

- UK based tier 1 MSO offering broadband and entertainment services, engaged with Tata Elxsi to digitize their business process workflows and operational activities.

## Project

- The digitization initiative, encompasses replacing manual configuration of the Network devices with automation.
- Feature enhancement on the digital network platform to onboard new use cases towards existing and new service roll outs.

## Scope

- Implementation of use cases on the digital platform through Solution Design, Development, QA and UAT.
- The use cases, include – (1) Broadband (2) Wireless Mobile (3) Exchange Management (4) ISAM Management (5) Stinger Management.
- Customization services in the UI, Business Process Management layers of this digital platform.
- QA: Development and execution of test cases, and test case automation
- UAT: UAT with stakeholders, and UAT related bug fixes and validation
